API

Zend Expressive

The Application acts as an "onion"

Pipelines

"The terminology "pipeline" is often used to describe the onion. One way of looking at the "onion" is as a queue, which is first-in-first-out (FIFO) in operation. This means that the first middleware on the queue is executed first, and this invokes the next, and so on (and hence the "next" terminology). "

Output Data Processing

View should not render

Output Data Processing

Example:
ZF1-App MyTracking

Route

- application/json -> Zend Expressive
- text/html -> Legacy App

Prep Work

- composer: add Zend Expressive
- composer: add legacy-bridge
- legacy bridge config
- zf1-prereq

Demo by Debugging

<https://bitbucket.org/account/user/janatzendteam/projects/ELM>

Example:
Symfony 1 App Jobeet

Route

- `^rest/(.*)$` expressive.php
- `^(.*)$` index.php

Prep Work

- composer: add Zend Expressive
- composer: add legacy-bridge
- legacy bridge config
- sf1-prereq

Demo by Debugging
